

GIS-Centric EAM: Industry Recommendations for GIS in Asset Management

"GIS in Asset Management", "GIS-Centric EAM", "GIS AMS" are terms relatively new, but often used in organizational discussions about inventorying, maintaining and maximizing assets and their life cycle. However, often less discussed are the industry standards, recommendations, or simple advice of how to best utilize GIS in Asset Management. This presentation aims to simplify the topic, explain industry standards and lessons learned, and guide organizations to a path to success in their Asset Management Strategy.

Bio:

Emily is a SME for Vertical Geodatabases making her a valuable resource for clients and her colleagues. Currently, Emily is assisting in the creation and maintenance of vertical geodatabases for various business organizations, assisting business units with their asset management configuration, and developing standard operating procedures for both internal and external use.
